

GreenCity 2

MĀTĀBI

The most versatile sprayer for:

- Balconies and terraces.
- Humidifying, fertilising and eliminating pests and diseases.
- Watering without washing nutrients away from the roots.

Why GreenCity 2?

Wide filling mouth with filter.

For easy filling without splashes. It also has an anti-trip mesh filter for your own homemade natural recipes that normally contain ingredients that could obstruct the sprayer nozzle.

Safety relief valve.

The sprayer has a safety valve calibrated to 2.8 bar.

When you finish spraying you can pull on the valve to depressurise the tank manually.

Fine spray nozzle

Adjustable nozzle

Exchangeable nozzles.

GreenCity sprayers have two nozzles to cater to different needs.

- The **fine spray nozzle** creates a mist of droplets that will stay on the surface of your plants for longer, providing moisture.
- The **adjustable nozzle** has a cone with which you can change the type of spray and create a jet. This means you can fertilise your plants, combat pests and even clean their leaves.

Constant spray.

There is a lever on the end of the shut off assembly for an easy spray control. If you have a lot of plants you can block the lever to achieve a constant spray, with no need to keep pressing it.

Hose.

With the 1.3 m hose you can effortlessly spray the most difficult to reach areas, such as plants hanging over balconies or in high places, with no need to move the tank up close to them.

Lance.

The 13 cm lance is helpful to reach the most inaccessible spots and spray fertiliser or pesticide without damaging any leaves, particularly in the case of more bushy or leafy plants.
