

GreenCity7

MĀTĀBĪ

Useful for:

- Areas with many plants.
- Humidifying, fertilising and eliminating pests and diseases.
- Watering without washing nutrients away from the roots.

Why GreenCity 7?

Wide filling mouth with filter.

The tank has a wide mouth for easy filling without splashes. It also has an anti-trip mesh filter for your own homemade natural recipes that normally contain ingredients that could obstruct the sprayer nozzle and a dispenser in the filling mouth lid.

Translucent tank with level indicator.

The translucent tank allows you to view the volume of liquid.

Fine spray nozzle

Adjustable nozzle

Exchangeable nozzles.

GreenCity sprayers have two nozzles to cater to different needs.

- The **fine spray nozzle** creates a mist of droplets that will stay on the surface of your plants for longer, providing moisture.
- The **adjustable nozzle** has a cone with which you can change the type of spray and create a jet. This means you can fertilise your plants, combat pests and even clean their leaves.

Constant spray.

If you have a lot of plants and need to spray for a long time, you can block the lever for a constant spray, with no need to keep pressing it.

Pressure regulator.

You can use this for high-precision pest treatment, as spraying will be uniform and effective throughout the entire application. You can always spray the same amount of product and water with no waste, helping protect the environment. It also provides greater autonomy.

Hose.

With the 1.8 m hose you can move around the area and reach the furthest spots with no need to carry the tank with you all the time.

Lance.

The 36 cm lance is helpful to reach difficult or inaccessible areas. You can spray fertiliser or pesticide without damaging any leaves, particularly in the case of more bushy or leafy plants.

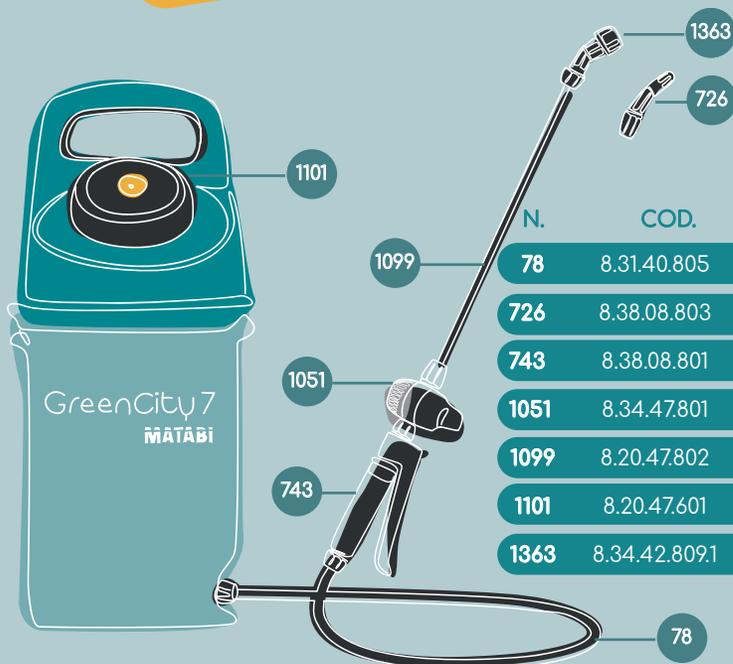

Safety relief valve.

The safety valve is calibrated to 2.8 bar, for easy, convenient depressurisation when you finish spraying. Just press the button in the centre of the sprayer lid.
